Financial Statement - Balance Sheet

Regulatory disclosures related to capital and liquidity standards

Being a global private bank with more than 30 years of experience in the Swiss Market, Mercantil Bank (Schweiz) AG is considering a professional and diligent risk management one of the key drivers for the Bank's long-term success and its sustainable growth. This includes the effective management of a strong capital basis as well as a proactive liquidity planning and management.

As a category 5 bank, Mercantil Bank (Schweiz) AG must comply with the extended supervisory disclosure obligations defined in circular 16/01 "Disclosure – banks" by the Swiss Financial Market Authority FINMA

Overview of Risk-weighted Assets (OV1)

(in 1000 CHF)

Nr.	Risk Type	RWA		Minimum capital requirement	
		31.12.2021	31.12.2020	31.12.2021	in %
1	Credit Risk	69'803	55'664	5′586	25.40%
20	Market Risk	2′204	1'916	176	15.06%
24	Operational Risk	17'468	17'488	1′397	-0.12%
25	Items not deducted in application of threshold 3, but risk- weighted with 250% minimum capital requirements	0	0	0	0.00%
27	Total	89'475	75'068	7'158	19.19%

Remarks:

The increase in assets exposed to credit risks (+25.40%) originated from extending the financial investments portfolio with corporate bonds at the bottom tier of investment grade. The increased exposure to market risks (+15.06%) was driven by the higher net long exposure in foreign exchange forward positions.

Applied approaches to calculate the required regulatory capital:

Credit Risks: International Standard approach (SA-BIZ)

Market Risks: De-Minimis approach
 Operational Risk: Basic-Indicator approach

Liquidity: Management of Liquidity Risks (LIQA)

For qualitative information on the Bank's liquidity management strategy, its objectives as well as the emergency liquidity, please refer to the "Risk Management" section of the notes to the financial statement.

Credit Risks - Credit Quality of Assets (CR1)

(in 1000 CHF)

	Risk Type	Gross carryi	ng values of	Alloweness/		
Nr.		defaulted assets	not defaulted assets	Allowances/ impairments	Net Values	
1	Loans (excl. Debt instruments)	0	97'322	0	97'322	
2	Debt Securities	0	68'859	0	68'859	
3	Off-Balance sheet exposures	0	1'513	0	1'513	
4	Total	0	167'694	0	167'694	

Remarks:

The definition of defaulted items corresponds to that of impaired receivables, i.e. for these receivables it is unlikely that the debtor will be able to meet his future obligation. Impaired claims and any collateral must be valued at their liquidation value whereby the value must be adjusted according to the debtor's creditworthiness.

Credit Risk: Overview of Risk Mitigation Techniques (CR3)

(in 1000 CHF)

<u> </u>	. 1000 0.1.1						
Nr.	Risk Type	Exposures unsecured: Carrying amount	Exposures secured by collateral: secured amount	Exposures secured by financial guarantees or credit derivatives: secured amount			
1	Loans (incl. Debt instruments)	86'367	74'536	5'277			
2	Off-Balance sheet exposures	728	785	0			
3	Total	87'095	75'322	5'277			
3a	of which defaulted	0	0	0			

Remarks

Eligible collaterals are handled according to the comprehensive approach, which means that the credit position is netted against the provided collateral by applying the regulatory standard haircuts.

Operational Risk: General Information (ORA)

Qualitative information on the Bank's strategy, processes and organization to manage operational risks are published in the "Risk Management" section of the notes to the financial statement.

To calculate the required capital for operational risk, Mercantil Bank (Schweiz) applies the "Basic-Indicator" approach.

Objectives and guidelines for interest rate risk management in the banking book – qualitative disclosure requirements (IRRBBA)

a. Risk management and risk assessment purposes

Interest rate risk in the banking book arises from maturity mismatches between assets and liabilities which are sensitive to changes in interest rates. The interest rate risk associated with products which do not have a contractual maturity, referred to as non-maturing products, is estimated using the methodology of replicating portfolios: Based on the historical behavior of volumes of these products it assigns the position balance associated with a non-maturing banking product to time bands that are presumed to reflect their empirical maturities.

b. Risk management and risk assessment strategies

The measurement and management of the resulting risks is essential and is part of the asset and liability management (ALM) performed by the ALM Committee (ALCO) of the bank, which comprises members of the executive management, and the responsible person for treasury and research. The Risk Management function also provides information to the ALM system operated by the risk management unit of the bank's parent company for consolidated supervision.

c. Risk assessment frequency and key indicators

All IRRBB measures (EVE, NII – according FINMA circular 2019/2 and BIS "Interest Rate Risk in the Banking Book") are calculated as part of the monthly closing process. Subsequently, these measures are referred to as "Standard Scenarios". In addition, a Mercantil Bank Switzerland (MBS) specific ΔEVE scenario is calculated, which also serves as measure against the interest rate risk limit determined by the Board of Directors. The ALM system measures the potential impact of market risks on the net interest income and the equity of the bank by means of value at risk, repricing gap and duration calculations. The analysis of the economic situation and the derivation of interest rate forecasts from it include a regular analysis of the income and value effects. Further, a mark-to-market analysis is used to assess the impact of a stress scenario to the free available equity.

d. Interest rate shocks and stress scenarios

The change in the economic value (ΔEVE) is calculated according to the standard scenarios as described in the FINMA circular 2019/2. In Addition, MBS measures the change in economic value with an institute specific scenario, which is based on an instantaneous, parallel interest rate shock of +/- 100bp and +/- 200bp for all currencies. For the calculation of the change in net interest income (ΔNII), MBS takes the following assumptions:

- Static balance sheet
- Constant client margins on roll over
- Immediate, parallel interest rate shock of +-/150bp for CHF and +/- 200bp for EUR/USD according to the standard scenarios as described in the FINMA circular 2019/2

e. Model assumptions deviations

The Bank applies the model assumptions prescribed by FINMA for disclosure. There are no deviations.

f. Hedging strategies and accounting treatment

The Bank manages the interest rate risks arising from its customer business through conservative risk limits approved by the Board of Directors and by actively managing the fixed-interest periods on its assets side. The Bank does not currently enter into any additional hedges such as interest rate swaps.

g. Main modelling assumptions and calculation parameters for table IRRBBA1 and IRRBB1

Changes in the present value of capital (ΔEVE)

- 1 A risk-free interest rate without surcharges such as potential client margin or spread components is used to determine the calculation of ΔΕVΕ.
- 2 The cash flows are allocated to the maturity band midpoints in accordance with Appendix 2 of FINMA Circular 19/2 Interest rate risks Banks while maintaining the maturity of the nominal revaluation cash flows.
- 3 For the discounting of all cash flows a risk-free interest rate curve is used.

Changes in the expected income (ANII)

- 4 The following procedures and assumptions were used to determine the changes in future net interest income:
 - income simulation for the one-year horizon
 - a constant balance sheet structure assumed
 - The base scenario is determined using forward rates.
 - Due interest-bearing transactions are renewed (several times if necessary) with their original maturity and constant customer margin until the end of the observation period
 - Assumptions are made regarding minimum/maximum interest rates, duration and elasticities

Non maturing exposures

- Positions with an undetermined repricing maturity are replicated with different maturity profiles. The procedure for determining replication is based on the specifications of the IRRBB (Interest rate risk in the banking book) issued by the Bank for International Settlements in 2016:
 - Segmentation Retail/Wholesale
 - Breakdown between stable and unstable portion
 - Split in Core and Non-Core positions
 - Calculation of the weighted shares and allocation to the maturity bands
 - Allocation of positions in maturity bands, whereby nonstable and non-core shares are allocated to the maturity band limit of up to 1 month. Assumptions are made for the allocation to the maturity bands of the core units and allocated to maturity bands 7, 8 and 9.

Exposures with early repayment options

6 Positions with early repayment options are not material.

Term deposits

Behavioral withdrawal options in the banking book are not material. If they were, they would not be part of the ΔEVE / ΔNII calculations.

Interest rate options

8 There are no interest rate options in the banking book.

Derivative exposure

 $9 \quad \text{The bank has no interest derivative financial instruments in the banking book.} \\$

Quantitative information on the structure of positions and resetting of interest rates (IRRBBA1)

Interest rate risk in the banking book is not underpinned for capital purposes but is subject to a regulatory threshold. As at December 31st 2021, the maximum economic value effect according to the standard scenarios described in FINMA Circular 2019/2 on the Bank's interest rate risk positions in the banking book is lower than the threshold of 15% of eligible capital set by the supervisory authority for which inappropriately high interest rate risks are assumed.
